

In Mold Labeling (IML) Technology

StackTeck offers complete tooling and handling solutions for In Mold Labeling (IML) applications!

- Fully automated high speed systems for label inspection, label insertion into mold, part retrieval, counting, quality control, ready for manual packing or complete boxing.
- Technology applicable for single face and stack molds.
- Fully debugged, integrated systems at StackTeck Technical Center.

Label Configurations:

- Flat labels for lids.
- Cross shaped labels (5 sided) for rectangular containers.
- Rectangular shaped labels (1 or 3 sided) for containers.
- Wrap around labels for round and rectangular containers.

Advantages of IML packaging:

- Higher quality graphics.
- Maximum utilization of printing space on product.
- Product ready to ship immediately after molding.
- Reduction of inventory.
- Versatility of small production runs.
- Simple change over to another label.

StackTeck and its partner Machines Pagès have over 2 decades of combined IML experience, which includes more than 300 IML automation systems and over 70 IML molds.
